

# **Aakriti...2012**

## **Objective:**

Evolve a community of suitable houses out of their spaces that can take up in a natural disaster FLOOD without fail.

## **eligibility:**

All students with a valid identity card of their respective educational institutes are eligible to

Participate

## **Introduction:**

A number of people die every year due to flood in different parts of our country.

Here we are considering flood plains of Bihar, which is annually hit by Kosi Flood washing away thousands of lives and shelters.

## ***What we can contribute to our nation for this with Architecture?***

A small vision to try providing such places houses which can be also used efficiently when the place gets suddenly flooded. To make such places livable and save lives during such natural disaster.

## **Design requirements:**

- Each house should have the following requirements:
    1. Entry space and a small outdoor interaction space.
    2. A multipurpose room.
    3. A cooking cum dining area
    4. Toilet and bath cubicles
  - Minimum of 100 numbers of such houses should be there in a community.
  - Design demands:
    1. Sustainability of design
    2. Flexibility of design
    3. Cost Effective design
    4. Stability of structure
- # Site selection is to be from the flood plains of BIHAR.
